DETAILED ACTION

Claim Objections

1. Claim 13 is objected to because of the following informalities: Claim 13, line 1, "claim 1" should be changed to "claim 11". Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
4. Claims 4-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Correia et al in view of Coulson.

Art Unit: 1725

Correia et al (col. 3, lines 64+) teach the claimed casting method and ceramic core for producing a hollow airfoil investment-cast article such as a turbine nozzle 11 by using internal ceramic core 128, shaping a temporary wax form 114 having wax flash ribs 126B at the free end 132 of the core, and external shell 130 and pouring of molten metal into a space created by removal of wax form. Correia et al fail to teach the use of internal ceramic core with datum pad and method

However, Coulson (col. 1, lines 47+) teaches the use of datum pad (plastic identification tag 30) and method for the purpose of effectively providing datum pad on a ceramic core for use in casting molten metallic materials having corresponding data (cast geometric features) corresponding to the datum pad on the core. It would have been obvious to one having ordinary skill in the art to provide Correia et al the use of datum pad (plastic identification tag 30) and method as taught by Coulson in order to effectively provide datum pad on the temporary wax flash ribs 126B at the free end 132 of the internal ceramic core for use in casting molten metallic materials having corresponding data (cast geometric features) corresponding to the pad on the core.
